

The JUDGE - Court Management System

The JUDGE is a fully integrated, on-line Court Management Information System. The JUDGE tracks each case from its inception through final disposition. Fines, court costs and bond payments are also tracked. In addition, the system provides a variety of computer generated reports as described below.

To speed data entry, the JUDGE has four data. The Court History Table establishes notes when dispositions or pending codes automatically generates the fine and court ordinance or statute. The two remaining Table, which contain pertinent information such as names, addresses, phone numbers, etc.

special tables that contain user-assigned code links that automatically generate court change. The Violation Cost Table costs associated with a particular offense, tables are the Attorney Table and the Judge

The JUDGE interacts with CITATIONS/JUDGE to track moving violations and parking tickets through the Court process.

THE JUDGE MODULES

PREPROCESS - Preprocess provides a convenient means for dispositioning erroneously issued Citations, as well as the controlled transfer of Citations to the JUDGE for Court processing. The selection also presents a "fast path" for payment processing.

COMPLAINT PROCESSING AND DISPOSITION - Comprehensive information on Defendants, Complaints, and Dispositions are captured in this module. Information includes defendant name, address, personal descriptors, and driver's license data, court data such as judge, clerk, attorney, case type, appearance date and time, presence code, pleas, verdict, disposition date and code, pending date and code, fine and court costs. Court costs may be allocated for up to ten different court cost funds. To aid in data entry, user-defined code tables contain links that can automatically update the pending code and generate a case history note when a new disposition is entered.

Reports include individual case listings, court calendars by name, citation and case, listings of all activity by disposition and pending codes.

Associated information can be entered through:

CASE HISTORY NOTES - These notes are automatically generated through a link with the disposition and pending codes. Notes include the current system date, user ID and a description. Case Notes can also be used to enter free-form comments about the case.

CONTRACT MAINTENANCE creates Court-approved contracts for time payments work payments.

PAYMENTS AND VOID PAYMENTS - Payments and partial payments made by defendants are entered in this module. All court fiscal transactions, including void payments, are entered with an associated clerk's code. This allows tracking of both the agency's and each clerk's transactions. A variety of fiscal reports are provided.

WITNESSES - This module captures witness information for each court case, by using the case and suffix number as one of the key fields. Identifying information, (name, address, phone number, etc.), date subpoena issued, subpoena disposition, and other pertinent witness data are tracked.

DOCUMENTS - Using the case and suffix number as a key field, this module accesses a table for the document code, and captures data such as date issued, date signed, person(s) issuing and signing, log-out and returns.

BOND TRACKING - Bond tracking maintains comprehensive data on bonds: The type of bond, bond company license, bond company name, address and phone number, depositor, deposit date, refund and forfeiture information. Four bond-related reports (see below) provide fiscal listings.

JUDGE REPORTS

Court Calendar Report by Name
Court Calendar Report by Citation
Court Calendar Report by Case
Disposition Activity -- All or Selected
Pending Activity -- All or Selected
Case Report with Notes
Case Notes
Outstanding Balance/Disposition
Outstanding Balance/Pending
Daily Distribution Report -- All or Specified Clerk
Receipt Management -- All or Specified Clerk
Outstanding Bond Report by Deposit
Bond Deposit Listing by Deposit
Bond Forfeiture Listing by Forfeiture
Bond Refund Listing by Refund
